

Yerevan, January 29, 2013

PRESS RELEASE

PRESIDENTIAL ELECTIONS IN ARMENIA. SECOND PUBLIC OPINION POLL

Leading Armenian media company ArmNews TV initiated and sponsored major public opinion research project, aiming at establishing and analyzing socio-political attitudes and opinions of Armenian population and track the dynamics of the electoral preference before 2013 Presidential elections. The project is implemented by Armenian Sociological Association and Baltic Surveys / The Gallup Organization in December 2012 – February 2013.

The second national representative public opinion poll of this project was conducted between January 15-23, 2013 and was publically presented on January 29.

In this poll, 1,020 adult residents of Armenia, eligible to vote in the general elections, were interviewed using face-to-face in-homes interview methodology.

The response rate was 65%, the margin of error does not exceed $\pm 3,1\%$ with a confidence level of 95%.

The second poll was planned in such a way, that the fieldwork has started immediately after the registration of the Presidential candidates commenced and the official campaign for the Presidential elections has not started yet. This poll aimed to measure the electoral support for registered candidates in the elections.

Dr. Rasa Alisauskiene from Gallup points out, that Armenian voters keep their level of high interest in forthcoming Presidential elections: 39% of them said that they definitely will vote in the elections (against 42% in December) and 43% “probably will vote” (against 36% in December). However, one should remember, that in the national poll, only the citizens of Armenia who actually are in the country are interviewed, while the electoral list includes also these, who are abroad, thus the final elections turnout in countries with high emigration rate as Armenia is usually lower than the numbers of national polls (excluding emigrants) show. Thus taking various factors into consideration while building the model to estimate expected level of the turnout on the election day, at this stage in the campaign the expected turnout is around 61%, $\pm 3,1\%$ margin of error.

In mid-January 2013, when the registration of the candidates has ended, the majority of a interviewed voters expressed their support for the re-election of acting President – 66% of all the respondents said they would vote for SerghSargsyan (the list of 8 registered candidates was presented to the respondents).10% of all interviewed respondents were going to vote for RaffiHovhannisyan, 4% for ParuirHayrikyan, 4% for Hrant Bagratyan,1 % for Aram Harutyunyan . A.Ghukasyan, A.Melikyan and V.Sedrakyan were support by less than 1% of the interviewed respondents each. At the same time, 16% of the interviewed respondents have not decided yet, which candidate to support.

Dr. Gevorg Poghosyan of ASA comments: “the results of the second poll conducted as part of the ArmNews TV, Baltic Surveys/ Gallup Organization and ASA project “Armenian voters mood prior to the Presidential elections – 2013” showed, that by nominating own having candidate to compete in these elections, both Republican party and Heritage party have increased their own supporters base, while Prosperous Armenia has lost some support from the electorate due to not having own candidate in these elections”.

The second survey confirmed, that TV remained the most important source of the political information for the residents of Armenia, followed by “word of mouth” and internet. Internet is especially important for young urban voters.

ArmNews TV is implementing this project with Baltic Surveys /The Gallup Organization and ASA, because Gallup is one of the most respected and well known polling organizations in the world and Baltic Surveys/The Gallup Organization is the most experienced international polling organization working in Armenia with 16 projects implemented with ASA since 2005.

The presentation of the survey results are available on:
